EMBEDDED SYSTEM LABORATORY

Department of Mechatronics Engineering

LAB SUPERVISOR: ENGR. SARMAD HAMEED
**Objectives:** The objective of this course is to teach students design and interfacing of microcontroller-based embedded systems. High-level languages are used to interface the microcontrollers to various applications. There are extensive hands-on labs/projects. Embedded system for sensor applications will be introduced. GUI using C# will be introduced. Students will be expected to develop independence and learn much of the material on their own.

**EXPERIMENTS:**

- LED Display Experiment
- Traffic Signal Control Experiment
- FND Display Experiment
- Text LCD Display Experiment
- ADC Experiment
- DAC Experiment
- Sound Experiment
- DC Motor Control Experiment
- Stepper Motor Control Experiment
- Key Matrix Experiment
- Rotary Switch Experiment
- SPI Communication Experiment
- I2C Communication Experiment
- Digital Clock (DS1302) Experiment
- Digital Thermometer (DS1620) Experiment
- UART Communication Experiment
- 32X16 Dot Matrix Display Experiment
Arduino is an open-source electronics prototyping platform based on flexible, easy-to-use hardware and software. It's intended for artists, designers, hobbyists, and anyone interested in creating interactive objects or environments.

Student after getting training form MIDAS trainers experience their learning skills on ARDUINO board where they make various application based projects. Such as:

- Android Platform based 3-Axis Robotic Arm
- Unmanned Vehicle
- Android based Home Automation System
- Kinect controlled car
- Labview based GUI for temperature controller
- Labview based GUI for motor direction controller
### Inventory list: Embedded System Laboratory
